

KING'S BEND PARK SOLAR ARRAY

HOW IT WORKS

When the sun shines onto a solar panel, energy from the sunlight is absorbed by the photovoltaic cells in the panel. This energy creates electrical charges that move in response to an internal electrical field in the cell, causing electricity to flow.

INSTALLATION

These panels were installed by the Town of Pittsford in 2020.

KW

This installation produces a peak wattage of 15.48kW.

MODULES

This solar array contains 43 solar modules.
